**with FIXED IP mobile broadband**

## **Fixed IP Mobile Broadband for Business**

The new Fixed IP Mobile Broadband solution from Prodec has been created to give back control to IT Managers.

### **Benefits of the Prodec Fixed IP solution:**

**Fixed IP Address** – This allows private access to remote devices for diagnostics, upgrades and monitoring

**Aggregated Data bundles** – If you take more than one SIM, Prodec will bundle all the monthly data allowances together to give you a pot of bandwidth that can be used each month across all the SIMs. This means that heavy users will be able to use spare data from lighter users without incurring any additional cost until the full data allocation has been used.

**Data** – Comes with 3GB as standard. Additional data can be pre-paid (with discount) or paid for once used

**Roaming** - International roaming can be unbarred if required

**Options** - Can be supplied SIM only or with USB dongle
