What is Prodec BaaS?

Prodec's Backup-as-a-Service (BaaS) provides you with a universal, ultra secure, backup solution that covers the entirety of your data landscape.

Prodec BaaS enables you to securely backup, recover and restore critical data to Prodec's private cloud, without impacting business operations.

All backup data is securely encrypted when in transit to the Prodec cloud and, depending on your requirements, can also be encrypted when at rest, to ensure your data security objectives are always met.

How do Prodec deliver BaaS?

Prodec's BaaS is powered using Acronis. Prodec uses Acronis because unlike other backup technologies, it provides a universal agent that can backup almost anydevice, from any location.

The Acronis management portal is also amongst the easiest to use in the marketplace, providing transparency for protected devices, storage volume and associated costs at all times.

Using the intuitive self-service portal, you can monitor, restore and provision all backups.

The portal also provides full transparency on the cost of service with a PAYG consumption-based structure.

Prodec's BaaS offering

Prodec Disaster Recovery as a Service (DRaaS) enables you to protect and recover data by replicating applications to Prodec's highly-secure, UK-only, datacentres.

- You will have access to the full Prodec engineering base for troubleshooting or managed restorations and on a self-service basis if preferred.
- The Prodec cloud is UK-only, ensuring that data sovereignty is retained for backed up data.
- Protected backups can be run in virtual form from the Prodec cloud for up to 1 month with no additional costs, allowing time for the protected systems to be resolved.
- The service is provided on a fixed PAYG cost structure, this means there are no minimum commitments or fixed-term contracts.
- There are no additional costs for restoring backup data and no hidden fees.
- Prodec provides direct site to datacentre (Layer 2) connectivity options for QoS, ensuring backup traffic does not interfere with normal business processes.
